</table>
| 10/17/2005 | 1.01      | Below is a summary of changes to the Querying and Reporting XML Service (QRXS) User Guide version 1.01. Effective October 17, 2005, this document version 1.01 replaces version 1.0. The changes in this version are indicated below:  
  - Updated sample code for obtaining error message text using the Application Programming Interface (API). Sections 5.3.3 and 5.3.4.  
  - Modified and added status codes. See Section 3.3. |
| 5/8/2006   | 1.02      | Below is a summary of changes to the Querying and Reporting XML Service (QRXS) User Guide version 1.02. Effective May 8, 2006, this document, version 1.02 replaces version 1.01. The changes in this version are indicated below:  
  - The Data Banks’ website is now located at http://www[npdb-hipdb.hrsa.gov](http://www.npdb-hipdb.hrsa.gov). The Data Banks are using a .gov domain name to help prevent fraud by showing Data Banks’ users that the NPDB-HIPDB website is under the Government-run domain. Please update your Internet bookmarks to reference the .gov address for the Data Banks’ website. NPDB-HIPDB website references in this document now refer to the new website address.  
  - Due to the NPDB-HIPDB website address change, all ITP and QRXS client programs must be upgraded to a new version. Updated client programs are now available on the NPDB-HIPDB website. While the current versions of the ITP and Querying and Reporting XML Service (QRXS) client programs will continue to function for a limited time, all ITP and QRXS users must upgrade their client program to the new version no later than September 18, 2006.  
  - Updated the commons-fileupload jar to version 1.1. |
| 7/31/2006  | 1.03      | Below is a summary of changes to the Querying and Reporting XML Service (QRXS) User Guide version 1.03. Effective July 31, 2006, this document, version 1.03 replaces version 1.02. The changes in this version are indicated below:  
  - Updated installation instructions for JRE 1.5 and the QRXS client software. See Sections 2.2 and 2.3. |
| 1/14/2008  | 1.04      | Below is a summary of changes to the Querying and Reporting XML Service (QRXS) User Guide version 1.04. Effective January 14, 2008, this document, version 1.04 replaces version 1.03. The changes in this version are indicated below:  
  - Added new status code -57. See Section 3.3. |

| 6/15/2009  | 1.09      | Below is a summary of changes to the Querying and Reporting XML Service (QRXS) User Guide version 1.09. Effective June 15, 2009, this document, version 1.09 replaces version 1.08. The changes in this version are indicated below:  
  - Added support for PDS transactions to the QRXS test environment in Section 4. |
| 8/31/2009  | 1.10      | Below is a summary of changes to the Querying and Reporting XML Service (QRXS) User Guide version 1.10. Effective August 31, 2009, this document, version 1.10 replaces version 1.09. The changes in this version are indicated below:  
  - Added support for proxy server authentication. See changes described in Section 5.4, Proxy Server.  
  - Added a showversion command. See changes described in Section 3.9, Show Version Number.  
  - Added the capability to change and reset passwords directly from the command line. See changes described in Section 3.8.2, Command Line Password Transactions.  
  - Updated the required JRE version to 1.6. |
| 01/25/2009 | 1.11      | Below is a summary of changes to the Querying and Reporting XML Service (QRXS) User Guide version 1.11. Effective January 25, 2010, this document, version 1.11 replaces version 1.10. The changes in this version are indicated below:  
  - Added specifications for receiving test responses. See Section 4, QRXS Test Environment. |
| 08/30/2010 | 1.12      | Below is a summary of changes to the Querying and Reporting XML Service (QRXS) User Guide version 1.12. Effective August 30, 2010, this document, version 1.12 replaces version 1.11. The changes in this version are indicated below:  
  - Updated Section 1.2, User Account Security.  
  - Updated Section 3.3, Status Codes.  
  - Introduced 1,000 file response limit. See the change described in Section 3.6, Downloading Files. |
| 01/24/2011 | 1.13      | Below is a summary of changes to the Querying and Reporting XML Service (QRXS) User Guide version 1.13. Effective January 24, 2011, this document, version 1.13 replaces version 1.12. The changes in this version are indicated below:  
  - Updated Section 3.3, Status Codes. Code C02 was modified.  
  - Updated Section 4.2.3, PDS. Corrected the Data Bank Subject ID to be 888000000000111. |
<table>

| 6/13/2013    | 2.00      | Below is a summary of changes to the Querying and Reporting XML Service (QRXS) User Guide version 2.00. Effective June 13, 2013, this document, version 2.00 replaces version 1.18. The changes in this version are indicated below:  
  - Updated URLs to the Data Bank’s Informational Website: http://www.npdb.hrsa.gov  
  - Updated the email address for the NPDB Customer Service Center to help@npdb.hrsa.gov.  
  - Removed references to the HIPDB to reflect the merge of the two separate Data Banks into the NPDB.  
  - Updated Section 1.2.3, Resetting Passwords to state that users may reset their own passwords from the Data Bank Sign In page. |
| 9/3/2013     | 2.01      | Below is a summary of changes to the Querying and Reporting XML Service (QRXS) User Guide version 2.01. Effective early 2014, this document, version 2.01 will replace version 2.00. The changes in this version are indicated below:  
  - Section 4.2.1 and Section 4.3.1, the InputURL was updated to https://qa.npdb.hrsa.gov/qrxs/servlet/XMLInputServlet and the OutputURL was updated to https://qa.npdb.hrsa.gov/qrxs/servlet/XMLOutputServlet  
  - Modified Section 3.5 to make the maximum submission file size 512 KB.  
  - Section 6.3.1.2, the final String url was updated to https://qa.npdb.hrsa.gov/qrxs/servlet/ |
| 9/12/2016    | 2.02      | Below is a summary of changes to the Querying and Reporting XML Service (QRXS) User Guide version 2.02. Effective September 12, 2016, this document, version 2.02 will replace version 2.01. The changes in this version are indicated below:  
  - Updated minimum required Java version to 1.8  
  - Updated URLs to https  |
| 8/20/2021    | 2.03      | Below is a summary of changes to the Querying and Reporting XML Service (QRXS) User Guide version 2.03. Effective August 20, 2021, this document, version 2.03 will replace version 2.02. The changes in this version are indicated below:  
  - Updated a reference to error code S2 to comply with the new password length requirements  
  - Updated the example passwords to be in compliance with the new password length and complexity requirements. |

Table 2: Status Codes Returned ....................................................................................................... 6
Table 3: Report DCNs for Testing ................................................................................................... 15
1. Introduction

1.1 Scope

The National Practitioner Data Bank (NPDB) provides the Querying and Reporting XML Service (QRXS) to users who wish to send and receive machine-readable responses. These instructions provide details on installing and configuring the QRXS client software.

The QRXS client is a stand-alone program that transmits files containing transaction data to, and receives response files from, the NPDB. These transactions can be a one-time query, a report, a Continuous Query transaction, or a password change request. For security, data is transmitted over a Secure Socket Layer (SSL) connection. This program can be executed as a stand-alone program, or it can be executed under the control of other programs. An Application Programming Interface (API) is also available for additional flexibility when integrating QRXS transactions into existing software systems.

File formats for QRXS submissions and responses are defined in the Interface Control Documents (ICDs) published by the NPDB, available on-line at https://www.npdb.hrsa.gov/QRXS.

When using the QRXS, you are accessing a U.S. Government information system. System usage may be monitored, recorded, and subject to audit. Unauthorized use of this system is prohibited and subject to criminal and civil penalties. Use of this system indicates consent to monitoring and recording. Should you have questions concerning your responsibilities, please contact the NPDB Customer Service Center immediately as specified in Section 1.3, Contact Information.

1.2 User Account Security

1.2.1 User Accounts

Each entity has two types of accounts to access the NPDB, the Data Bank administrator account and user accounts. The Data Bank administrator account is used to create and manage the user accounts. User accounts are used to submit transactions and retrieve responses from the NPDB. The NPDB has established security policies in order to reduce the risk of unauthorized access to user accounts and protect the confidentiality of practitioner reports.

The NPDB ensures that QRXS transactions are verified as originating with your organization. This process involves a system that stores IP addresses for computers that have been "whitelisted" as belonging to your organization. IQRS administrators are responsible for maintaining this list. A page in the IQRS has been created to enable the Data Bank administrator to easily complete this task.

More information can be found on the QRXS Security web page: https://www.npdb.hrsa.gov/software/qrxsSecurity.jsp

1.2.2 User Account Password Policies

A user must provide their organization’s DBID, their User ID, and user account password each time they access the IQRS or the QRXS. If a valid password is not provided after three consecutive attempts, the user account is locked and the user must contact the Data Bank administrator to submit a user account password reset request.

Users are required to change their passwords periodically. A password change request can be submitted at any time to change an account’s password. Password restrictions and guidelines can be found at https://www.npdb.hrsa.gov/Passwords.

To ensure the security and privacy of user account passwords when using the QRXS, the response to a file-based password change request transaction can only be downloaded by the same user account that submitted the transaction.
1.2.3 Reseting Passwords

When a user or administrator forgets his or her password, or is locked out of the IQRS Service, he or she may reset it from the NPDB Sign In page. From the Reset Password page, the user will answer pre-established Challenge Question(s) and enter a new password. An email confirming the password reset will be sent to the user with a link to the NPDB Sign In page. This link is valid for one hour.

If using the QRXS, only the administrator can submit and download transactions to reset user passwords. The administrator cannot reset his or her own password. A password change transaction should be submitted instead of a password reset transaction.

1.3 Contact Information

The QRXS is updated periodically by the NPDB. It is strongly recommended that users join the QRXS Mailing List at https://www.npdb.hrsa.gov/MailingLists to receive notice of updates.

The NPDB makes an effort to notify users at least 1 month in advance of an update to code lists. Users should expect code lists to be updated quarterly. Additional updates to the QRXS specifications are required periodically. Users will be notified 6 months in advance of updates to the QRXS specifications that are not backward compatible. If you are already registered for the QRXS Mailing List and would like to be removed, contact the NPDB Customer Service Center.

For additional information, visit the NPDB website at https://www.npdb.hrsa.gov/software/aboutSoftware.jsp. If you need assistance, contact the NPDB Customer Service Center by email at help@npdb.hrsa.gov or by phone at 1-800-767-6732 (TDD 703-802-9395). Information Specialists are available to speak with you weekdays from 8:30 a.m. to 6:00 p.m. (5:30 p.m. on Fridays) Eastern Time. The NPDB Customer Service Center is closed on all Federal holidays.

1.4 Conventions

Names of files, URLs, parameters, example Data Bank Identification Numbers (DBIDs), example passwords, or documents are presented in italics.

http://www.oracle.com/

Data that must be entered into the computer, commands you must enter, contents of files, and contents of directories are presented in a different font (Verdana).

java com.npdbhipdb.QRXS send

Where the explicit use of upper or lower case letters are necessary due to the system interpreting upper and lower case letters as distinct characters, the text will clearly identify the command as “case sensitive.”
2. Installation

2.1 System Requirements

1. One of the following supported Microsoft Windows versions: Windows 2000, Windows XP, Windows 7, 8, and 10. The software can be expected to run on other platforms that support the required Java Runtime Environment (JRE), but only the supported versions have been tested.

2. Access to the Internet and SSL port (443).

2.2 Software Requirements

1. JRE version 1.80 or higher. It is recommended that the latest JRE version available is used.

   The JRE can be downloaded from Oracle’s JRE download page:

   http://www.java.com

   Follow the instructions provided on the web page to download and install the JRE. If the default installation is followed, the JRE will install in C:\Program Files\Java\jre.

2. The QRXS-v1_05.zip distribution available at https://www.npdb.hrsa.gov/QRXS.

   The following files are provided in the zip file:

   commons-codec-1.3.jar
   commons-fileupload-1.1.jar
   commons-httpclient-2.0.jar
   commons-logging.jar
   QRXS-Javadoc-Files-v1_05.zip
   QRXS-Readme.txt
   qrxs-v1_05.jar
   qrxs.properties

2.3 Software Installation

1. Install the JRE. Instructions are provided at Oracle’s JRE download page, referenced above.

2. Create a working directory for running the client. For example:

   mkdir c:\QRXS

3. Install the JAR files from the QRXS-v1_05.zip distribution. Copy the .jar files (qrxs-v1_05.jar, commons-codec-1.3.jar, commons-fileupload-1.1.jar, commons-httpclient-2.0.jar, and commons-logging.jar) to the JRE’s library extension directory. For example (using the default JRE installation directory):

   c:\Program Files\Java\jre\lib\ext

4. Install the initialization file. Copy the file qrxs.properties to the directory from which the QRXS client executes (your working directory, e.g., c:\QRXS).

Note: Previous versions of QRXS-related files should be removed before installing newer versions in order to ensure the latest files are used.
3. Client Configuration and Execution

3.1 Executing the QRXS Client

The client is controlled via command-line parameters. The following are the only supported commands:

- `java com.npdbhipdb.QRXS send` (for sending submission files)
- `java com.npdbhipdb.QRXS receive` (for receiving response files)
- `java com.npdbhipdb.QRXS encode <password>` (for encoding a password in the initialization file)
- `java com.npdbhipdb.QRXS resetpassword <userid>` (for resetting a users’ password)
- `java com.npdbhipdb.QRXS changepassword <password>` (for changing your password)
- `java com.npdbhipdb.QRXS encodeproxypwd <password>` (for encoding a proxy server password in the initialization file)
- `java com.npdbhipdb.QRXS showversion` (to display the version number of the QRXS client)

Note: The program name and the command-line parameter values are case sensitive.

3.2 Preparing the Initialization File

On startup, the `qrxs.properties` file is read for initialization information. The `qrxs.properties` file resides in the working directory as described in Section 2.3, Software Installation, Step 4. A sample `qrxs.properties` file is provided in the zip file. All the required properties in the initialization file must be complete and valid. If the information is missing or invalid, the program terminates. Users may configure their own `qrxs.properties` files to reflect their desired download directory location, upload/download list file locations, and to specify use of a proxy server.

Certain characters may be interpreted as instructions by the user’s operating system or by the QRXS client. For this reason, the `qrxs.properties` file must be written in such a way that each character is interpreted literally, and not as an instruction. In order to accomplish this, characters that may be interpreted as instructions must be escaped; i.e., a backslash (“\”) character is placed in front of the character that may be interpreted as an instruction.

The following is a sample `qrxs.properties` file:

```
DBID=123400000000123
Password=UuhUh5owKFEeue
UserID=myuserid
DownloadDir=c:\QRXS\download
UploadListFile=upload.lst
DownloadListFile=download.lst
```

Notes:

1. The properties are case sensitive.
2. The password is encoded and must be set using the client’s encode command. Instructions on setting the password are in Section 3.7, Encoding the Password.
3. The backslash character itself must be escaped, because in this case it must be interpreted literally; this is the reason for the two backslashes in the directory values.
4. The properties within the file may appear in any order.
Table 1: Initialization File Properties

The following properties are allowed. Users must enter any properties that they do not wish to use the default values for:

<table>
<thead>
<tr>
<th>Properties</th>
<th>Descriptions</th>
</tr>
</thead>
<tbody>
<tr>
<td>DBID*</td>
<td>The Data Bank Identification Number (DBID).</td>
</tr>
<tr>
<td>UserID*</td>
<td>The User ID of a user registered with the NPDB. Do not use the Entity Data Bank Administrator’s ID except for password-related transactions.**</td>
</tr>
<tr>
<td>Password*</td>
<td>The encoded NPDB password (also known as the IQRS password).</td>
</tr>
<tr>
<td>DownloadDir*</td>
<td>Directory to hold the downloaded QRXS response files.</td>
</tr>
<tr>
<td>UploadListFile</td>
<td>Name of the file containing one or more names of QRXS submission files; defaults to upload.lst.</td>
</tr>
<tr>
<td>DownloadListFile</td>
<td>File containing names of the QRXS response files downloaded; defaults to download.lst.</td>
</tr>
<tr>
<td>LogFile</td>
<td>Name of the file containing error messages; defaults to qrxs.log.</td>
</tr>
<tr>
<td>ProxyHostName</td>
<td>Name of the proxy host (usually an IP Address). Only required when using a proxy server (see Section 5.4, Proxy Server for more information).</td>
</tr>
<tr>
<td>ProxyPort</td>
<td>Port number of the proxy server. Only required when using a proxy server (see Section 5.4, Proxy Server for more information).</td>
</tr>
<tr>
<td>ProxyUser</td>
<td>User name for authenticating with the proxy server. Only required when using a proxy server requiring authentication (see Section 5.4, Proxy Server for more information).</td>
</tr>
<tr>
<td>ProxyPassword</td>
<td>The encoded password for authenticating with the proxy server. Only required when using a proxy server requiring authentication (see Section 5.4, Proxy Server for more information).</td>
</tr>
<tr>
<td>ProxyDomain</td>
<td>The Windows domain name used by the proxy server for NTLM authentication. Only required when using a proxy server using NTLM authentication (see Section 5.4, Proxy Server for more information).</td>
</tr>
</tbody>
</table>

* Required property.
** For detailed information on maintaining User IDs and passwords refer to https://www.npdb.hrsa.gov/Passwords.

For UploadListFile, DownloadDir, LogFile, and DownloadListFile, acceptable values of the properties include the file name only, or a path name and the file name. If the value is the file name only, then the file is assumed to be located in the working directory.

3.3 Status Codes

The QRXS client provides status in three ways. First, an exit code containing the status code value is always returned; second, a file called qrxsstat.dat, which contains the status code, is created in the program’s working directory; and third, unsuccessful status codes and corresponding messages are appended to a log file located in the program’s working directory. A status code of “C00” indicates that the transaction was successful, and any other status code indicates that the transaction failed.
Table 2: Status Codes Returned

The following status codes are returned:

<table>
<thead>
<tr>
<th>Status Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>C00</td>
<td>Success, no errors.</td>
</tr>
<tr>
<td>C01</td>
<td>Error on NPDB server, reattempt transfer.</td>
</tr>
<tr>
<td>C02</td>
<td>Authentication failed; DBID, UserID, or Password are invalid, or the user account is inactive.*</td>
</tr>
<tr>
<td>C03</td>
<td>Password expired for DBID and UserID.*</td>
</tr>
<tr>
<td>C04</td>
<td>No filenames specified for upload.</td>
</tr>
<tr>
<td>C05</td>
<td>Error sending files to server, reattempt transfer.</td>
</tr>
<tr>
<td>C06</td>
<td>Client sent an invalid request.</td>
</tr>
<tr>
<td>C07</td>
<td>Inactive DBID.</td>
</tr>
<tr>
<td>C08</td>
<td>Maximum upload file size exceeded; reduce file size and reattempt transfer.</td>
</tr>
<tr>
<td>C09</td>
<td>All uploaded files are invalid.</td>
</tr>
<tr>
<td>C10</td>
<td>Unable to communicate with NPDB server, reattempt transfer.</td>
</tr>
<tr>
<td>C12</td>
<td>Database error on NPDB server, reattempt transfer.</td>
</tr>
<tr>
<td>C13</td>
<td>Not all of the files were processed successfully.</td>
</tr>
<tr>
<td>C16</td>
<td>The DBID for your organization must be renewed before you can access NPDB services. The NPDB requires all registered entities to periodically renew their registration information. Re-registration enables the NPDB to maintain accurate entity contact information and provides the entity with the opportunity to review the legal requirements and verify their compliance for participation with the Data Bank. The certifying official for your organization must review the NPDB statutory authorities, available at <a href="https://www.npdb.hrsa.gov/resources/aboutLegsAndRegs.jsp">https://www.npdb.hrsa.gov/resources/aboutLegsAndRegs.jsp</a>, as part of the renewal process. Once the statutory authorities have been reviewed, complete the on-line registration renewal form by logging in to the IQRS and selecting Renew Registration on the registration confirmation screen. The completed form must be signed and mailed to the Data Bank for processing. If your organization has already mailed the registration renewal to the NPDB, it will be processed within 1 business day of its receipt by the NPDB. Data Bank Correspondence will be sent once the NPDB has successfully processed your registration renewal form. If necessary, you may complete a new form by selecting Renew Registration below. If you need further assistance, please contact the NPDB Customer Service Center at 1-800-767-6732.</td>
</tr>
<tr>
<td>C17</td>
<td>The DBID for your organization must be renewed before you can access NPDB services. The NPDB requires all registered entities to periodically renew their registration information. Re-registration enables the NPDB to maintain accurate entity contact information and provides the entity with the opportunity to review the legal requirements and verify their compliance for participation with the Data Bank. The certifying official for your organization must review the NPDB statutory authorities, available at <a href="https://www.npdb.hrsa.gov/resources/aboutLegsAndRegs.jsp">https://www.npdb.hrsa.gov/resources/aboutLegsAndRegs.jsp</a>, as part of the renewal process. Contact the Entity Data Bank Administrator of your organization so they can renew the registration. If you need further assistance, please contact the NPDB Customer Service Center at 1-800-767-6732.</td>
</tr>
<tr>
<td>C21</td>
<td>Client error, refer to log file for more information.</td>
</tr>
<tr>
<td>C22</td>
<td>Usage error, check command-line parameter.</td>
</tr>
<tr>
<td>C23</td>
<td>Error in reading Initialization file qrxs.properties, check that qrxs.properties file is in working directory.</td>
</tr>
<tr>
<td>C24</td>
<td>Unable to open program log file, check that disk space is available.</td>

<tr>
<td>C40</td>
<td>Error opening connection to NPDB server, check Internet connection and reattempt transfer.</td>
</tr>
<tr>
<td>C43</td>
<td>Error during client startup.</td>
</tr>
<tr>
<td>C54</td>
<td>Error downloading response files, reattempt transfer.</td>
</tr>
<tr>
<td>C56</td>
<td>Error getting the list of response files downloaded, reattempt transfer.</td>
</tr>
<tr>
<td>C57</td>
<td>Your password has expired. You may login to the IQRS to reset your password or contact your Entity Data Bank Administrator or the NPDB Customer Service Center.</td>
</tr>
<tr>
<td>C58</td>
<td>Your account has been locked. Contact your Entity Data Bank Administrator to reset the password. If you are using an Entity Data Bank Administrator account, contact the NPDB Customer Service Center to reset the password.</td>
</tr>
<tr>
<td>C59</td>
<td>Your account has been locked. The number of invalid login attempts has exceeded the allowable login limit. Contact your Entity Data Bank Administrator to reset the password. If you are using an Entity Data Bank Administrator account, contact the NPDB Customer Service Center to reset the password.</td>
</tr>
<tr>
<td>C60</td>
<td>Your password must be changed before other transactions can be submitted.</td>
</tr>
<tr>
<td>C61</td>
<td>Error changing the password.</td>
</tr>
<tr>
<td>C62</td>
<td>Error resetting the password.</td>
</tr>
<tr>
<td>C64</td>
<td>No more than one password change transaction can be submitted at one time. Reduce the number of password change transactions to one, reattempt transfer.</td>
</tr>
<tr>
<td>C68</td>
<td>To ensure account security, your Entity Data Bank Administrator must authorize this connection.</td>
</tr>
<tr>
<td>C69</td>
<td>To ensure account security, the account holder must contact the NPDB Customer Service Center at 1-800-767-6732 to access the system.</td>
</tr>
</tbody>
</table>

* For detailed information on maintaining User IDs and passwords refer to [https://www.npdb.hrsa.gov/Passwords](https://www.npdb.hrsa.gov/Passwords).

** Either two instances of the client program are running or one instance of the program was terminated prematurely. If it is the latter, remove the qrxslock file from the program’s working directory and try again.

*** Under specific circumstances the IQRS password reset service is available to obtain a new password. Log in to the IQRS with your expired password to begin. You must have an email address stored in your user account to use this service. You may also contact your Entity Data Bank Administrator to reset the password. If you are using an Entity Data Bank Administrator account, you may also use the IQRS password reset service or contact the NPDB Customer Service Center to reset the password.

**** For more information about account security visit the QRXS Security page: [https://www.npdb.hrsa.gov/software/qrxsSecurity.jsp](https://www.npdb.hrsa.gov/software/qrxsSecurity.jsp)

### 3.4 QRXS Status File

The *qrxsstat.dat* file contains the final status of the QRXS client execution. This file is created in the working directory immediately upon program completion. The file contains two lines. The first line indicates the overall status of “Done” or “Not Done.” The second line contains a status code of “C00” or another status code indicating failure (see Section 3.3, Status Codes, for error codes that may be returned).

Sample *qrxsstat.dat* file for a successful execution:

```
Overall status = Done
StatusCode=C00
```
Sample `qrxsstat.dat` file for an unsuccessful execution:

```
Overall status = Not Done
StatusCode=C22
```

### 3.5 Uploading Files

The upload file contains the names (including the full or relative path) of the submission files that are sent to the NPDB. The name of the upload file must be specified in the `qrxs.properties` file using the `UploadListFile` property. If it is not specified, it defaults to `upload.lst`.

A sample upload file with four submission files to upload, using a full path:

```
c:\QRXS\upload\0000001.xml
c:\QRXS\upload\0000002.xml
c:\QRXS\upload\0000004.xml
c:\QRXS\upload\0000005.xml
```

A sample upload file with three submission files to upload, using a relative path:

```
upload\file0001.xml
upload\file0002.xml
upload\file0003.xml
```

Notes:

1. In the upload file, the backslash is not escaped.

2. A file name can contain a relative or full path as noted above. Each set of files above is specified differently, but all the files are located in `c:\QRXS\upload`, and the working directory is `c:\QRXS`.

3. A submission file listed in the upload file may be a report, a one-time query, a Continuous Query transaction, or a password change transaction. No more than one password change transaction can be included at any time.

4. Submission files must not exceed 512 KB.

### 3.6 Downloading Files

Response files are stored in the download directory after being successfully downloaded from the Data Bank. The names of the files are in the following format: `###########.xml` (i.e., a unique 20-digit ID number with the ‘xml’ extension).

The download list file contains the names of downloaded files. The name of the download list file must be specified in the `qrxs.properties` file with the `DownloadListFile` property. If it is not specified, it defaults to `download.lst`.

The following is the content of a download list file that might be created:

```
10000000000000000001.xml
10000000000000000002.xml
10000000000000000003.xml
10000000000000000004.xml
```

Notes:
1. The downloaded response files have unique names. If files from a previous download exist in the directory, then the new files will be added to the directory without affecting the existing files.

2. The download list file is recreated on every successful download of response files. The download list file is not created if there are no response files to download or if there was an error downloading response files.

3. Response files will not exceed 1MB. Responses that are larger than 1MB are separated into multiple response files. Responses for a file-based password change request will always be returned in a single response file. Users should read response files in numerical order.

4. The maximum number of responses that will be returned from the NPDB in one connection is 1,000. You may download more than 1,000 responses by performing a receive multiple times.

5. Responses to report, one-time query, and Continuous Query submissions are available for download within an average of 2 to 4 hours after submission. Under certain circumstances, additional processing time may be required. Please do not re-submit your report, one-time query, or Continuous Query transaction on the subject in question, since this will result in duplicate transactions and duplicate fees. If your submission file is not formatted properly, the NPDB may not be able to process the file. If you do not receive your response within 2 to 3 business days of submission, please call the NPDB Customer Service Center.

6. Continuous Query Report Disclosures will be available within one day of a report being received.

7. Responses to file-based password change request submissions are generally available for download within several minutes.

3.7 Encoding the Password

In order to maintain the integrity and confidentiality of the NPDB information, the QRXS initialization file must contain a valid encrypted NPDB password. A valid password and UserID is required for the successful execution of all upload and download transactions. The password is associated with a registered NPDB user, and will expire periodically. Password restrictions and guidelines can be found at https://www.npdb.hrsa.gov/Passwords. The command listed below must be executed prior to the first upload or download transaction, and each time the NPDB user updates their password.

The password is encoded by executing the encode command of the client and providing the password as a command-line parameter. The password is encoded and written to qrxs.properties. The password must be entered using this encode method for login validation to succeed. The following is an example of how to perform the encoding:

```java
java com.npdbhipdb.QRXS encode OakTreesGrowTa11
```

The encrypted password is then written to the qrxs.properties file:

```
Password=2MhEB2Fsue1I7eqJLDyI
```

If your organization uses a proxy server to connect to the internet and the proxy server requires authentication, you will also have to encode the proxy password in the properties file. The proxy password is encoded by executing the encodeproxypwd command and providing the password as a command-line parameter. The proxy password is encoded and written to qrxs.properties. The proxy
password must be entered using this encode method for proxy authentication to succeed. The following is an example of how to perform the encoding:

```java
java com.npdbhipdb.QRXS encodeproxypwd myPa$$w0rd
```

The encrypted password is then written to the `qrxs.properties` file:

```
ProxyPassword=V5dbDONep3sh0/Yg49OYpQ= 
```

Notes:

1. The commands and the passwords are case sensitive.
2. The encoding process may cause some characters in `qrxs.properties` to be escaped; this is denoted by a backslash in front of the escaped characters.
3. The encoding process may cause the lines in `qrxs.properties` to be reordered; this does not affect the operation of the client.

### 3.8 Password Changes

As explained in Section 1.2.2, User Account Password Policies, a valid password is required to submit transactions to and download responses from the NPDB.

There are three methods for QRXS users to change user account passwords within the NPDB:

1. Interactively via the Internet using the Integrated Querying and Reporting Service (IQRS).
2. Through a QRXS command-line operation.
3. Through a QRXS transaction file submission, with data provided in the format specified in the Password Change XML ICD.

#### 3.8.1 Types of Password Change Transactions

Password changes can be one of two types:

**Change:** Used by an entity user or Entity Data Bank Administrator to change their own account password. For file-based password change transactions, the response file can only be downloaded by the same user account that submitted the transaction. **File-based password changes must be re-encoded before using. Command-line password changes are automatically encoded.**

**Reset:** Used by the Entity Data Bank Administrator to reset a user’s password when the account is locked or the password is unknown. Only the Entity Data Bank Administrator is permitted to reset a user’s password. For file-based password reset transactions, only the Entity Data Bank Administrator may download the response file. An Entity Data Bank Administrator may not “reset” their own password, but may “change” their password. The reset transaction returns a system-generated temporary password. This password must be encoded into the `qrxs.properties` file before use, and the user must perform a password “change” transaction before submitting any other transaction.
3.8.2 Command-Line Password Transactions

Users and Entity Data Bank Administrators can change their own NPDB password using the changepassword command:

```
java com.npdbhipdb.QRXS changepassword OakTreesGrowTa11
```

If the status code "C00" is indicated after submitting a changepassword command, the password change was successful and the `qrxs.properties` file was updated with the correct encoded Password parameter:

```
Password=XShrjh5blOsXCNX3SyxiZ6dweHs\=
```

If the password change transaction fails, the reasons for failure will be displayed on the console:

```
java com.npdbhipdb.QRXS changepassword xxyyzz
QRXS Changing Password...
Error code: S2: The new password must be between 15 and 64 characters long.
S9: The new password did not contain enough different characters.
Status Code: C61
```

Entity Data Bank Administrators can reset any user's password (except their own) using the resetpassword command along with the User ID of the account to be reset:

```
java com.npdbhipdb.QRXS resetpassword bobjones
```

If the status code "C00" is indicated after submitting a resetpassword command, the password reset was successful.

```
QRXS Resetting Password...
New Password: 862ewjc9w
Status Code: C00
```

A system-generated password is displayed. This password must be encoded and changed by the user (using the changepassword command). The user may then use the password to submit QRXS files.

3.8.3 File-Based Password Transactions

File-based password change transactions are submitted as XML files through the QRXS. The Password Change XML ICD details the necessary file-format specifications.

If status code "C00" is indicated after submitting a file-based password change request transaction, the password for the specified DBID/User ID was changed successfully. The new password must be encoded into the `qrxs.properties` file in order to download the password change response, submit additional transactions, and download responses. For that process, follow the instructions specified in Section 3.7, Encoding the Password.

If status code "C00" is not indicated after submitting a password change request transaction, the password change request for the specified DBID/User ID was unsuccessful. The password rejection file will be returned immediately and stored as specified in the download.lst file. Refer to the Code Lists document at [https://www.npdb.hrsa.gov/Codes](https://www.npdb.hrsa.gov/Codes) for a list of rejection codes.

It is recommended when submitting a file-based password change transaction that you do not submit any other transactions until the password change has been successfully processed and the response file
downloaded. No more than one password change transaction can be included in the upload file at any time.

### 3.9 Show Version Number

You can use the showversion command to determine the current version of the QRXS client program in use:

```
java com.npdbhipdb.QRXS showversion
```

The current version will be shown in the response on the console:

```
QRXS Version: 1.05
Status Code: C00
```
4. QRXS Test Environment

The following sections guide you through configuring the QRXS Client to connect to the QRXS test environment. The QRXS test environment enables you to test network connectivity to the NPDB system and to validate your submission files are well-formed and meet the mandatory data requirements.

4.1 Overview

- Submissions that are well-formed and meet the data requirements will receive an immediate status of success.

- Rejected submissions will result in an immediate rejection response file.

- Submission files will not be processed through the system. Sample QRXS response files will be returned via QRXS Receive. See the Querying And Reporting XML Service (QRXS) Response File Test Mappings document for a full listing of available sample files that may be received. If no particular response file is specified (see Section 4.3 Receiving Test Files below), a sample Continuous Query Enrollment and Continuous Query Report Disclosure will be returned. In addition, sample response files may be found in the QRXS File Format Specifications zip file.

- QRXS test environment submissions will NOT be billed.

- Transactions can be submitted either as an entity or as an agent on behalf of an entity.

- In order to access the QRXS test environment you must obtain a “vendor ID” from [https://www.npdb.hrsa.gov/software/softwareSignIn.jsp](https://www.npdb.hrsa.gov/software/softwareSignIn.jsp). Use your Vendor ID as your User ID to submit transactions.

4.2 Submitting Test Files

The entityDBID and agentDBID inside each XML submission file should be modified to match the test DBID listed within the `qrxs.properties` initialization file.

4.2.1 Configuration

Configure your `qrxs.properties` initialization file as follows to submit files to the QRXS test environment:

```
UserID=<your vendor ID>
#The entity DBID below should be 800000000000000.
#To test as an agent, use DBID=800000000000001.
DBID=800000000000000
DownloadListFile=download.lst
DownloadDir=download
UploadListFile=upload.lst
Password= bSTIrO3yVunS8272zwvjPb6fIpM\=
InputURL=https:\/qa.npdb.hrsa.gov/qrxs/servlet/XMLInputServlet
OutputURL=https:\/qa.npdb.hrsa.gov/qrxs/servlet/XMLOutputServlet
VerificationURL=https:\/qa.npdb.hrsa.gov/qrxs/servlet/XMLResponseVerificationServlet
```
4.2.2 Payment

Users submitting one-time queries, or Continuous Query enrollments, or renewals may use either:

- A pre-configured EFT account.

  ```xml
  <payment>
    <EFT>true</EFT>
  </payment>
  ```

- The credit card number 4111111111111111. The credit card expiration date may be any future date.

  ```xml
  <payment>
    <creditCard>
      <number>4111111111111111</number>
      <expirationDate>2017-01-11</expirationDate>
      <cardholderName>JOE SMITH</cardholderName>
      <cardholderAddress>
        <address>123 TEST ST</address>
        <city>TEST CITY</city>
        <state>ND</state>
        <zip>11111</zip>
      </cardholderAddress>
    </creditCard>
  </payment>
  ```

4.2.3 Continuous Query

Continuous Query enrollments, renewals, updates, cancellations, and status requests can be tested by sending Continuous Query submission files to the QRXS test environment. On submission there will be an immediate confirmation file returned.

NPDB Subject IDs 88800000000111 and 88800000000222 may be used to test renewals, updates, cancellations, and status requests. databankSubjectID 88800000000111 should be used for transactions submitted by the entity, and databankSubjectID 88800000000222 should be used for transactions submitted by the agent on behalf of the entity.

Updates may be validated against the following subject data (which will match the sample report). Remember, if more than 3 fields are updated in one update the update will reject.

```xml
<individual>
  <name>
    <last>DOE</last>
    <first>JOHN</first>
  </name>
  <gender>M</gender>
  <birthdate>1933-06-01</birthdate>
  <workAddress>
    <address>123 MAIN STREET</address>
    <address2>12</address2>
    <city>FAIRFAX</city>
    <state>VA</state>
    <zip>22033</zip>
  </workAddress>
</individual>
```
4.2.4 Reports

Users may validate Correction Reports and Revision-to-Action Reports against test reports in our system. Use the DCNs below to test Correction and Revision-to-Action Report submissions.

<table>
<thead>
<tr>
<th>DCN</th>
<th>Type of Report</th>
</tr>
</thead>
<tbody>
<tr>
<td>2000000000000001</td>
<td>Individual State Licensure Initial Report</td>
</tr>
<tr>
<td>2000000000000013</td>
<td>Individual State Licensure Revision to Action Report</td>
</tr>
<tr>
<td>2000000000000002</td>
<td>Organization State Licensure Initial Report</td>
</tr>
<tr>
<td>20000000000000012</td>
<td>Organization State Licensure Revision to Action Report</td>
</tr>
</tbody>
</table>

4.3 Receiving Test Files

Users may specify the type of response file they wish to receive by referring to the Querying And Reporting XML Service (QRXS) Response File Test Mappings. The Response Type column lists the exact <Response Type> to place in the UserID field of the `qrxs.properties` initialization file. If no particular response file is specified, a sample Continuous Query Enrollment and Continuous Query Report Disclosure will be returned. The sample response files returned are identical to the response files found in the QRXS File Format Specifications zip file. Please note, the vendor ID returned within the sample files is invalid and should be ignored.

4.3.1 Configuration

Configure your `qrxs.properties` initialization file as follows to receive files from the QRXS test environment:

```
UserID=<your vendor ID>|<Response Type>
# The entity DBID below should be 8000000000000000.
# To test as an agent, use DBID=8000000000000001.
DBID=8000000000000000
```
DownloadListFile=download.lst
DownloadDir=download
UploadListFile=upload.lst
Password= bSTIrO3yVunS8272zwvjPb6fIpM=
InputURL=https:\://qa.npdb.hrsa.gov/qrxs/servlet/XMLInputServlet
OutputURL=https:\://qa.npdb.hrsa.gov/qrxs/servlet/XMLOutputServlet
VerificationURL=https:\://qa.npdb.hrsa.gov/qrxs/servlet/XMLResponseVerificationServlet

4.3.1.1 Requesting Multiple Response Files
Users may request multiple response files with a QRXS receive by indicating multiple <Response Type> names in the User ID field. The names must be separated by a “|” character.

For example: UserID=<your vendor ID>|SL_Ind_Initial|SL_Ind_Void|SL_Ind_Appeal

Will return the following three response files:

SL_Ind_Initial_Response.xml
SL_Ind_Void_Response.xml
SL_Ind_Appeal_Response.xml

4.3.1.2 Requesting Response File Versions
Occasionally, multiple versions of a response file may exist. This may be due to an anticipated system change, where a response file will show a future file specification. Users may specify a particular file version by indicating the <Response Version> after the <Response Type>. They must be separated by a “:” character. **If a version is not specified, the most current version will be provided. The version number for a particular sample file is found in the Read Me text of the sample response files.**

For example: UserID=<your vendor ID>|SL_Ind_Initial:1.05|Query_Ind_Single:1.01|SL_Ind_Appeal:1.05

Will return the following three response files:

SL_Ind_Initial_Response.xml
Ind_Single_Success_Response.xml
SL_Ind_Appeal_Response.xml

4.3.2 Continuous Query

Sample Continuous Query Report Disclosure and sample Continuous Query Enrollment Responses will be returned with report information that matches the Sample Report with DCN 20000000000000001, specified in Section 4.2.4.
5. Sample Configuration and Execution

The following sections guide you through a sample configuration and execution of the QRXS client. This is only a sample configuration and may be changed if desired.

5.1 Configuration

The client is installed in the directory `c:\QRXS` for entity DBID 123400000000123, UserID BobJones, and password OakTreesGrowTa11. The initialization file is configured with the download directory `c:\QRXS\download`, upload file `updlist.fil`, download list file `qrxsresp.fil`, and log file `qrxserrors.fil`. The submission files for upload are located in `c:\QRXS\upload`. The user creates the new directories:

```
  cd QRXS
  mkdir download
  mkdir upload
```

The following is a listing of files in directory `c:\QRXS`:

```
  qrxs.properties
  <DIR>  download
  <DIR>  upload
```

The working directory is `c:\QRXS`. Encode the password by executing the following command:

```
  java com.npdbhipdb.QRXS encode OakTreesGrowTa11
```

The following is a printout of the `qrxs.properties` initialization file (the order of properties may vary; this is normal):

```
  UploadListFile=updlist.fil
  Password=2MhEB2Fsue1I7eqJLDyI
  DownloadDir=download
  DBID=123400000000123
  UserID=BobJones
  DownloadListFile=qrxsresp.fil
  LogFile=qrxserrors.fil
```

5.2 Uploading Submission Files

The submission files must first be uploaded to the NPDB. Submission files `0000001.xml`, `0000002.xml`, `0000003.xml`, and `0000004.xml` are placed in the upload directory `c:\QRXS\upload`. The upload file, `updlist.fil`, is placed in the working directory `c:\QRXS`. The following is a printout of `updlist.fil`:

```
  c:\QRXS\upload\0000001.xml
  c:\QRXS\upload\0000002.xml
  c:\QRXS\upload\0000003.xml
  c:\QRXS\upload\0000004.xml
```

Execute the following command, either from the command prompt or from a user application, to upload files to the NPDB. This command is case sensitive and must be executed exactly as shown here:

```
  java com.npdbhipdb.QRXS send
```
After execution of this command, the submission files are uploaded to the NPDB successfully. **The submission may generate some immediate responses**, depending on the processing required to handle the submissions. The number of responses received will be displayed:

```plaintext
QRXS Sending...
Received 2 response(s)
Status Code: C00
```

The response files are downloaded to the download directory, `c:\QRXS\download`. The download list file `qrxspresp.fil` is created in the directory `c:\QRXS`.

The file `qrxsstat.dat` is created in the working directory `c:\QRXS`. The `qrxsstat.dat` file indicates a successful status code of “C00.” The following is a printout of the `qrxsstat.dat` file that is created:

```plaintext
Overall status=Done
Status Code=C00
```

### 5.3 Downloading Response Files

The remaining response files may be downloaded after they have completed processing. To download response files, execute the QRXS client in receive mode:

```plaintext
java com.npdbhipdb.QRXS receive
```

After execution of this command the response files are downloaded from the NPDB successfully. The number of responses received will be displayed:

```plaintext
QRXS Receiving...
Received 4 response(s)
Status Code: C00
```

The four response files are downloaded to the download directory, `c:\QRXS\download`. The directory `c:\QRXS\download` contains the following files:

- `10000000000000000001.xml`
- `10000000000000000002.xml`
- `10000000000000000003.xml`
- `10000000000000000004.xml`

The download list file `qrxspresp.fil` is created in the directory `c:\QRXS`. The following is a printout of the `qrxspresp.fil` file:

```plaintext
c:\QRXS\download\10000000000000000001.xml
c:\QRXS\download\10000000000000000002.xml
c:\QRXS\download\10000000000000000003.xml
c:\QRXS\download\10000000000000000004.xml
```

The status file `qrxsstat.dat` is also created in the directory `c:\QRXS`. The following is a printout of the `qrxsstat.dat` file that is created:

```plaintext
Overall status=Done
Status Code=C00
```

### 5.4 Proxy Server

A proxy server is a program that mediates requests between the local network and the workstations on them and the Internet beyond. Contact your network administrator for proxy server information. To
enable the QRXS to work with proxy servers, the *qrxs.properties* file needs the parameters
*ProxyHostName* (specifies the host name of the proxy server; usually an IP Address), and *ProxyPort* (specifies the port number the proxy server connects to).

The QRXS client supports Basic, Digest and NTLMv1 authentication with proxy servers. If your proxy server requires authentication, the *qrxs.properties* file needs the parameters *ProxyUser* and *ProxyPassword*. The *ProxyPassword* parameter can only be set with the `encodeproxypwd` command:

```
java com.npdbhipdb.QRXS encodeproxypwd myPa$$w0rd
```

If your proxy server uses NTLM authentication, the *qrxs.properties* file will also need the parameter *ProxyDomain*. Set this parameter to name of the Windows domain used for authentication.

Once all required proxy parameters are set, sending and receiving from the QRXS proceeds as normal. The following is a printout of the *qrxs.properties* initialization file for use with a Proxy Server requiring NTLM authentication:

```
UploadListFile=updlist.fil
Password=2MhEB2Fsue1I7eqJLDyI
DownloadDir=download
DBID=123400000000123
UserID=BobJones
DownloadListFile=qrxsresp.fil
LogFile=qrxserrors.fil
ProxyHostName=111.111.111.111
ProxyPort=1000
ProxyUser=bobjones
ProxyPassword=V5dbDONep3sh0/Yg49OYpQ\=
ProxyDomain=NTDOMAIN
```
6. Application Programming Interface

6.1 Overview

The QRXS Application Programming Interface (API) is a Java-based library that provides the capability to interface with the QRXS. The API provides the same capabilities available in the QRXS client program. In fact, the QRXS client is built on top of the API. Javadocs for the QRXS API can be found on-line at https://www.npdb.hrsa.gov/QRXS.

6.2 When to use the API

The provided client program is appropriate for most users. The API may be beneficial for users who wish to integrate their QRXS interaction into existing Java software. Submitting files and examining responses and error codes can be done programmatically, eliminating the need to write code to parse the text results that are generated by the client program.

6.3 Using the API

Install the libraries as described in Section 2.3, Software Installation. The QRXS API is in the com.npdbhipdb package. Import the package to make the API visible to the Java application.

```java
import com.npdbhipdb.*;
```

6.3.1 Configuration

The QRXS Configuration class contains the properties needed to communicate with the QRXS. An instance of the Configuration is created and the object is passed to the send() or receive() method. A Configuration instance can be created using an existing initialization file (Section 3.2, Preparing the Initialization File), or by providing the property values directly during instantiation.

6.3.1.1 Using a File

A Configuration object can be created using the same properties file format (Section 3.2, Preparing the Initialization File) used for the client application. The password must be encoded in the file using the client’s encode command (Section 3.7, Encoding the Password) or the API encode() method (Section 6.3.2, Encoding). Exceptions can be thrown if a required property is not defined or if the file cannot be opened.

```java
final String configFilename = "qrxs.properties";

// create an instance of QRXS
QRXS qrxsClient = new QRXS();
QRXS.Configuration config;

try {
    // create Configuration using the properties file
    config = qrxsClient.new Configuration(configFilename);
} catch (QRXS.Configuration.InvalidConfigurationException e) {
    // configuration property missing
    System.out.println("Error: " + e.getCode());
}
```

```java
catch (QRXSException e) {
```

```java```
6.3.1.2 Using Parameters

A Configuration object can be created by specifying the required properties as parameters to the constructor. The constructor accepts all the required QRXS properties as arguments. Additional QRXS properties including proxy server settings can be set using the “set” methods as shown below. With this method there is no need to perform the password encoding required when using a file. An exception will be thrown if a property value is invalid.

```java
final String entityDBID = "123456787654321";
final String userID = "myusername";
final String password   = "OakTreesGrowTa11";
final String downloadDir = "C:/QRXS/download";

QRXS.Configuration config;
```

```java
// create an instance of QRXS
QRXS qrxsClient = new QRXS();

try {
    // create Configuration using the required values
    config = qrxsClient.new Configuration(entityDBID, userID, password, downloadDir);
    // QA environment
    final String url = "https://qa.npdb.hrsa.gov/qrxs/servlet/";
    config.setInputURL(url + "XMLInputServlet");
    config.setOutputURL(url + "XMLOutputServlet");
    config.setVerifyURL(url + "XMLResponseVerificationServlet");
    config.setLogFileName("c:/qrxs/qrxs.log");
    config.setProxyHostName("111.111.111.111");
    config.setProxyPort("8080");
    config.setProxyUser("username");
    config.setProxyPassword("myPa$$w0rd");
    config.setProxyDomain("NTDOMAIN");
}
```

```java
catch (QRXS.Configuration.InvalidConfigurationException e) {
    // configuration property invalid
    System.out.println("Error: " + e.getCode());
}
```

6.3.2 Encoding

Encoding is used to write an encrypted password to a configuration properties file. The file will be re-written with the password value encoded. The ordering of the properties in the file may be changed by the encoding process. The password in a configuration file **must be encoded** before sending and receiving or authentication will fail.

```java
final String password   = "OakTreesGrowTa11";
final String configFilename = "qrxs.properties";
```

String status;
// create an instance of QRXS client
QRXS qrxsClient = new QRXS();

try {
    status = qrxsClient.encode(configFilename, password);
    System.out.println("QRXS status: " + status);
}

catch (QRXSException e) {
    // unable to read/write the configuration file
    System.out.println("Error: " + e.getCode());
}

6.3.3 Sending

The send process involves establishing the connection to the QRXS, uploading the specified submission files, and receiving responses.

// create Lists to hold submissions and responses
List responseFilenames = new ArrayList();
List submissionFilenames = new ArrayList();
List errorFiles = new ArrayList();
String status;

// populate the list of file(s) to upload
submissionFilenames.add("C:/QRXS/upload/000000001.xml");
// add the remaining files
try {
    // send the files
    status = qrxsClient.send(config, submissionFilenames,
                            responseFilenames, errorFiles);
    System.out.println("QRXS status: " + status);
}

catch (QRXSException e) {
    System.out.println("Error Code: " + e.getCode());
    System.out.println("Error Message: " + e.getMessage());
}

Files returned in the response are stored to the location specified in the Configuration object. The responseFilenames List contains the names of the response files. Sent files that could not be processed are listed with the accompanying error code in a list of ErrorFile objects. Each ErrorFile object also contains one or more error messages giving a textual description of the error.

Iterator fileIter = errorFiles.iterator();

while (fileIter.hasNext()) {
    QRXS.ErrorFile err = (QRXS.ErrorFile) fileIter.next();
    System.out.println("File " + err.getFilename() + ", " + err.getCode());

    String errorMessages[] = err.getErrorMessages();
    for (int i=0; i<errorMessages.length; i++)
6.3.4 Receiving
The receive process establishes the connection to the QRXS and downloads any response files that have completed processing by the NPDB.

```java
// create List to hold responses
List responseFilenames = new ArrayList();
String status;
try {
    status = qrxsClient.receive(config, responseFilenames);
    System.out.println("QRXS status: " + status);
}
```

Files returned in the response are stored to the location specified in the Configuration object. The responseFilenames List contains the names of the response files.

6.3.5 Changing The Password
The password can be changed and optionally encoded into a configuration file. If the fourth parameter is true, the password will be encoded into the file specified in the third parameter. If the fourth parameter is false, the third parameter is ignored.

```java
try {
    // change the password and encode into c:/qrxs/qrxs.properties
    status = qrxsClient.changePassword(config, "OakTreesGrowTa11", 
                                          "c:/qrxs/qrxs.properties", true);
    System.out.println("QRXS status: " + status);
}
```

6.3.6 Resetting The Password
The Entity Data Bank Administrator can reset a user’s password if the user has lost the password or has been locked out.

```java
String userToReset = "JerrySmith";
```
try {
    // reset the password
    status = qrxsClient.resetPassword(config, userToReset);
    System.out.println("QRXS status: " + status);
}
catch (QRXSException e) {
    System.out.println("Error Code: " + e.getCode());
    System.out.println("Error Message: " + e.getMessage());
}
System.out.println("Temporary password for " + userToReset + " is:" + qrxsClient.getNewPassword());

6.3.7 Retrieving Version Number

The version number may be retrieved as a string value for printing or storing.

    // retrieves the version number of the QRXS client
    String versionNumber = qrxsClient.getVersion();
